

ACHIEVE A GENTLE **SELECTIVE DISSECTION**

THE CADISS® SYSTEM

Preserve critical structures with the CADISS® System through a selective weakening of the adhesions at the cleavage plane.

CADISS® BENEFITS

COMPLETE WITHDRAWAL

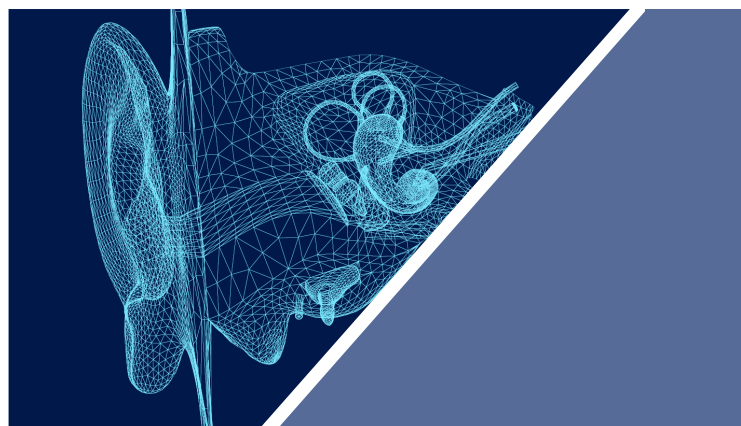

Reduction of relapses thanks to more complete withdrawal of the cholesteatoma

HEALTHY STRUCTURE PRESERVATION

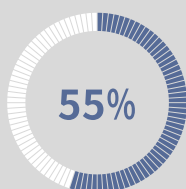

Gentle dissection of retraction pockets without damaging the middle ear structures

TESTED & APPROVED

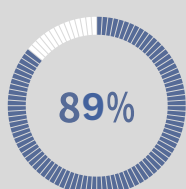

CHOLESTEATOMA

"CADISS has become an important instrument for my daily surgery to deal with tympanic membrane retractions, primary and recurrence of middle ear cholesteatomas. It is an easy instrument to use and helps remove the whole disease form the middle ear. Looking forward to get more experience with it."

Dr. Marta Sandoval
